shared decision making! Take home not only, but especially with regard to reproductive options for adult onset renal disease KDIGO ADPKD controversies conference: • lifecycle "Key issues include genetic counseling and preimplantation genetic diagnosis/in vitrofertilization access, which, despite cost concerns, imply NPHP1 deletion potentially significant societal savings. Consensus was reached that HNE18 deletion these decisions are for the patients and/or parents to make. - MUC1 cytosin insertion Worldwide access to these modalities is desired" "Preimplantation genetic diagnosis should be included in the discussion of reproductive choices with patients with ADPKD, although its availability and financial coverage vary from country to country" NVN NUS Countries with genetics service available: refer Multidisciplinary AND shared Cha

- a significant subset of adult onset (age ~ < 50) end stage renal disease patients will have monogenic disease
- genepanel diagnostics is a great tool, but: there are at least 3 relatively frequent causes of monogenic adult ESKD that will not be detected with standard method
- which patients to test: be a bit liberal
- panelcontent: be a bit liberal
- establishing a very accurate phenotype before testing might be outperformed by genetics first approach
- negative result does not mean a disease is not genetic!
